INTRODUCTION

The University of Chicago Press constitutes one of the divisions of the University of Chicago. An administrative board is appointed from the faculties, which determines general points of policy. The details of the management are in the hands of the Director.

The work is organized in three departments—publication, manufacturing, and retail.

Through the publication department the books and pamphlets announced elsewhere in this catalogue are sold or distributed.

The manufacturing department is equipped to do all kinds of printing and book-making, with special attention to the execution of academic work, including theses, the reports of educational bodies and learned societies.

Through the retail department the supplies for the various departments of the University are furnished and books for the general and departmental libraries are purchased. For the convenience of patrons a general stock of books and stationery is maintained and attention is given to mail orders.

Chicago, Ill.
November 1, 1903.

GENERAL INFORMATION

THE FOLLOWING INFORMATION with reference to publications announced in this catalogue should be noted:

Sizes of Books. The volumes described are uniform and in keeping with the general rules of book-making. The following descriptions represent the approximate dimensions: 32mo, 4 × 5½ inches; 18mo, 4⅝ × 6⅛ inches; 16mo, 4¾ × 7⅛ inches; 12mo, 5¼ × 7¾ inches; crown 8vo, 5½ × 8 inches; 8vo, 6 × 9 inches; royal 8vo, 6¾ × 9½ inches; 4to, 10 × 12 inches; folio, 13 × 15 inches. Special sizes—such as small 4to, square 8vo, square 16mo, etc.—are modifications of the sizes named above. The figures refer, in all cases, to external measurements of the cover.

Bindings. Many publications are furnished in paper covers. Cloth-bound editions are so indicated, and, when desired, orders will be taken for cloth- or leather-bound copies of paper-covered editions, either of single books or of volumes of series or periodicals. Quotations will be submitted on application, and in each case the cost-price of job-binding will be charged.

Prices. The prices given are retail prices at which the books are expected to be sold, and, when not otherwise indicated, the books are "net." On books marked with an asterisk the prices are "list," but they are sold with special discounts to the trade only. *Postage must be added to all mail orders for "net" books.* Prices are subject to change without notice.

Teachers wishing to examine any class-book in this catalogue with a view to its adoption as a text-book may have a sample copy at the "net" or "list" price, as the case may be. If an order is placed for ten or more, or if the sample is returned, the payment will be refunded. Works of reference are not included in this offer.

Remittances. In all cases remittances, whether by check, money order, or draft, should be made payable to THE UNIVERSITY OF CHICAGO.

Correspondence. All communications should be addressed to THE UNIVERSITY OF CHICAGO PRESS.

ANNOUNCEMENTS

The Philosophy of the History of a Small Nation. A series of lectures.

By PROFESSOR THOMAS G. MASARYK, of the University of Prague. This volume is a revision of a course of lectures delivered by the author at the University of Chicago during the Summer Quarter of 1902. In this work the following subjects are discussed:

1. A Statistical and Ethnological Survey of the Slavic Nations, especially of the Bohemian.
2. The Bohemian Reformation.
3. John Huss.
4. Peter Kheltshitsky, the Founder of the Bohemian Brethren.
5. Amos Comenius, the Bohemian Teacher of Nations
6. The Contrareformation in Bohemia.
7. The Resurrection of the Bohemian Nation at the End of the Nineteenth Century.
8. John Kollar, the Founder of the Theoretic Panslavism.
9. The Revolution of 1848. Francus Paletsky, the Bohemian Historian and First Political Leader.
10. Charles Havlitchek, the great National Leader under the Reaction after 1849.
11. Augustin Smetana, his Excommunication and his Social Philosophy.
12. The Parliamentarism and Constitutionalism in Bohemia and Austria. The Political Parties in Bohemia. The Fight for the Historical Right.
13. The Modern Bohemian Literature.
14. The Modern European Nationalism.
15. The Slavic Idea.
16. The National Philosophy of the Russians, Poles, and Bohemians Compared. The National Philosophy of the South-Slavs.
17. The Austrian Question.
18. The Los-von-Rom Movement.
19. The Problem of a Small Nation.

The Code of Hammurabi, King of Babylonia (about 2250 B. C.)

By ROBERT FRANCIS HARPER, Professor of Semitic Languages and Literatures, and WILLIAM RAINEY HARPER, Professor and Head of the Department of Semitic Languages and Literatures. This famous conquerer and king was the first to collect and formulate into a code, now recognized as the most ancient of all codes, the decisions rendered by his civil courts. This full code, containing about two hundred and eighty separate decisions or edicts, covering the rights of property, inheritance, marriage, divorce, injuries to life or person, rents, wages, slavery, etc., was engraved on stone and set up in the principal cities of his realm The work will be divided into two volumes, the first of which is by Professor R. F. Harper, and contains the text, transliteration, translation, glossary, historical and philological notes, and indices. Volume II is by Professor William R. Harper, and is a comparison of the Hammurabi and the Mosaic Codes.

Vol. I is announced for December 1, 1903, and Volume II is in preparation.

Russian Civilization: Its Past and Present

By PAUL MILYOUKOV, Professorial Lecturer on the Crane Foundation at the University of Chicago. This book is recast from a series of lectures delivered by the author during the Summer Quarter, 1903, and covers the following topics:

Russia and the United States—A Comparison.
The Nationalistic Idea.
The Religious Tradition.
The Political Tradition.
The Liberal Idea.
The Socialistic Idea.
Anticipations.

The Cumberland Road

By J. S. YOUNG.

The Barrows Lectures (1902–1903): Christian Belief Interpreted by Christian Experience

By CHARLES CUTHBERT HALL. This is a revision of a series of lectures delivered in India, Ceylon, and Japan.

Ancient Records

Edited by WILLIAM R. HARPER. The series includes:

Part I. Ancient Records of Assyria and Babylonia (6 volumes). Special editor, Robert Francis Harper, Professor of Semitic Languages and Literatures.

Part II. Ancient Records of Egypt. Special editor, James Henry Breasted, Assistant Professor of Egyptology and Semitic Languages.

Part III. Ancient Records of Palestine (5 volumes). Special editor, William Rainey Harper, Professor and Head of the Department of Semitic Languages and Literatures.

A History of Matrimonial Institutions

By GEORGE E. HOWARD.

THE UNIVERSITY OF CHICAGO DECENNIAL PUBLICATIONS

In addition to the Decennial Publications listed in the body of the catalogue, the following contributions are announced for publication in the near future. A descriptive catalogue of 44 pages containing complete announcements of the Decennial Publications of the University of Chicago will be sent upon application.

First Series

The Officials Mentioned in the Assyrian and Babylonian Letters of the Kouyunjik Collections of the British Museum (Vol. V, No. 2)

By ROBERT FRANCIS HARPER, Professor of Semitic Languages and Literatures. A list of the officials found in these letters, with a citation of all the passages in which they are mentioned.

The Letters of Nabû-bêl-šumâte Belonging to the Kouyunjik Collection of the British Museum (Vol. V, No. 4)

By JOHN M. P. SMITH, Associate in Semitic Languages and Literatures. Transliterations and translations, to which are appended some critical notes.

A Cone Inscription of Rim Sin (Vol. V, No. 5)

By IRA M. PRICE, Professor of the Semitic Languages and Literatures. Arioch of Ellasar was one of the confederates of Chedorlaomer of Elam, when the latter made his military campaign against rebellious subjects in the West in the twenty-third century B. C., as described in Gen. 14. He was an Elamite conqueror who had secured the sovereignty over Larsa. Rim Sin, Arioch, or Eriaku, has left us several short inscriptions, dating from about 2290 B. C. One of these, inscribed on a clay cone, somewhat injured by time, is now preserved in the Louvre in Paris. This has been copied from the original and is presented in a facsimile, with a translation and notes.

The Structure of the Text of the Book of Micah (Vol. V, No. 6)

By WILLIAM RAINEY HARPER, Professor and Head of the Department of Semitic Languages and Literatures. An arrangement of the Hebrew text of the Book of Micah in strophes, with brief summaries of the contents of each strophe and of each more extended logical section. Interpolated passages are indicated by the use of smaller type. Necessary emendations are incorporated in the text, attention being called to them by footnotes indicating (*a*) the Massoretic text, which is emended, (*b*) authorities adopting the same emendation, and, in the case of new changes, (*c*) the reasons urged in support of them. The purpose of the treatment is to restore, as nearly as possible, the original artistic form of the prophet's utterances and of the later accretions now contained in the book.

Comparative Syntax and the Syntax of Individual Languages (Vol. VI, No. 12)

By Wm. Gardner Hale, Professor and Head of the Department of Latin. The paper, which includes an examination of Morris's attitude toward comparative study as shown in his *On Principles and Methods in Latin Syntax*, and of the schemes of Hermann Lattmann, Dittmar, Botthek, and Methner, insists upon the indispensable importance of this study for the student of the syntax of any language, and gives illustrations from the field of Latin syntax. The writer's general scheme of classification of the uses of the Latin Subjunctive, as published in 1894 in his *Anticipatory Subjunctive in Greek and Latin* (The University of Chicago Press) and reproduced in the *Stolz-Schmalz Lateinische Grammatik* (1900), is more fully stated and justified, and a nearly complete synopsis of the constructions of the Latin finite verb is given. In connection with this, the origins of the following constructions are especially discussed: the subjunctive clause of fear or anxiety; the subjunctive of actuality (fact), in consecutive clauses; the subjunctive of obligation or propriety; the subjunctive with *dignus qui*, etc.; the subjunctive of natural likelihood; the subjunctive of consent or acquiescence; the subjunctive of proviso; the subjunctive of second person singular indefinite in dependent clauses; the occasional use of the same in general statements of fact.

On the Spectra of Stars of Secchi's Fourth Type. With seven plates (Vol. VIII, No. 5)

By George Ellery Hale, Professor of Astrophysics and Director of the Yerkes Observatory, Ferdinand Ellerman, Instructor in Astrophysics, and John Adelbert Parkhurst, Assistant in Astrophysics. Comparatively little has been known regarding the spectra of the red stars of Secchi's fourth type, as they are too faint for detailed study, except with the most powerful telescopes. Accordingly, a three-prism spectrograph has been used with the forty-inch Yerkes telescope in photographing the spectra of a number of these stars. The paper includes tables of the wave-lengths of several hundred bright and dark lines recorded on photographs, conclusions as to the chemical origin of the lines, and a discussion of the evolution of these stars, their distribution in the heavens, and their relationship to stars of other spectral types. The photographs of spectra are reproduced in a series of plates which accompany the paper.

Astronomical Photography with the 40-Inch Refractor and the 2-Foot Reflector of the Yerkes Observatory. With sixteen plates (Vol. VIII, No. 6)

By George Willis Ritchey, Instructor in Practical Astronomy and Superintendent of Instrument Construction at the Observatory. The forty-inch refractor of the Yerkes Observatory was designed primarily for visual observations, no provision having been made for direct photography with it. It has been found possible, however, to secure excellent photographs with this visual telescope by employing a yellow color-screen and isochromatic plates, by which means the sharp yellow or visual image is utilized and the outstanding blue light is excluded from the plate. Many of the plates which accompany this paper are from photographs of star-clusters and the moon obtained with the great refractor with a color-screen and a double-slide plate-carrier used in guiding. The photographs are of great value on account of their large scale and fine definition. In constructing the two-foot reflecting telescope, which was made in the Observatory instrument shops, special attention was given to the stability and rigidity of the mirror-supports and the skeleton tube, as also to the perfection of the driving mechanism and the guiding mechanism. The photographs of nebulæ and star-clusters obtained with this instrument, many of which are reproduced in the plates accompanying this paper, are so sharp and so rich in minute detail as to demonstrate the very great efficiency of reflecting telescopes in astronomical photography when sufficient attention is given to the perfection of their mirrors and mountings.

The Orbit of the Planet (334) Chicago (Vol. VIII, No. 7)

By Kurt Laves, Assistant Professor of Astronomy. Planet 334, one of the so-called Hilda type, discovered in 1892 and named "Chicago" by its discoverer, Professor Wolf, is marked for its small eccentricity and inclination. An attempt has been made by the writer to determine the absolute perturbations of Jupiter on this planet after Leverrier's method. In the present paper the expressions for the perturbative function, and its

derivative with respect to the major axis, are given, up to and including the fourth degree of small quantities in the periodic terms, and up to and including the sixth degree in the secular terms. It is hoped that the paper will be useful in a twofold way: that it will contribute a check for future theories of the orbits of this type of small planets that will not start from the Keplerian ellipse as a first approximation, and that it will lead toward a redetermination of the mass of Jupiter.

The Principal Elements in the Pleistocene Geology of the Northern Part of the Atlantic Coastal Plain (Vol. IX, No. 13)

By ROLLIN D. SALISBURY, Professor of Geographic Geology. The Pleistocene geology of this region includes a complex combination of stream, estuary, ocean, and wind activities, under the varying conditions occasioned by repeated secular changes of level.

A Contribution to the Theory of Glacial Motion (Vol. IX, No. 14)

By THOMAS CHROWDER CHAMBERLIN, Professor and Head of the Department of Geology. A theory of glacial motion based primarily on (1) the growth of the glacier granules, or ice crystals, as a result of the melting and refreezing of the water developed either at the surface or by internal stresses; and (2) the rotation and sliding of these granules on one another. The theory is opposed to the current theory of viscosity. While the fundamental elements on which this theory is based have been suggested before as elements in glacier motion, the attempt is made to bring out their relations to one another, to glacier movement, and to the various phases of glacier activity, in some detail.

A Description of the Brains and Spinal Cords of Two Brothers, Dead of Hereditary Ataxia, Cases XVIII and XX of the Series in the Family Described by Sanger Brown

By LEWELLYS FRANKLIN BARKER, Professor and Head of the Department of Anatomy. With an introduction by Dr. Sanger Brown. The article includes a detailed description of the gross and microscopic findings in the brains and spinal cords of two brothers, dead of hereditary ataxia. Colored plates illustrate the lesions in the spinal cord. Numerous process-method illustrations accompany the description of the cerebrum and cerebellum.

Second Series

The Study of Stellar Evolution: A Popular Account of Modern Methods of Astrophysical Research (Vol. X)

By GEORGE ELLERY HALE, of the Department of Astronomy. The purpose of this book is to tell how the origin, development, and decay of celestial bodies is studied in a modern observatory. The remarkable advances in astronomy during the second half of the nineteenth century, including the development of great telescopes, the introduction of the spectroscope and the many discoveries made with its aid, and the results obtained through the use of photography, have given the study of stellar evolution a prominent place in the work of many observatories. The explanations of instruments and methods are accompanied by illustrations, and the most recent astronomical photographs obtained with the telescopes of the Yerkes Observatory are reproduced in a series of plates. [In preparation.]

The Place of Apocalyptic Messianism in the New Testament (Vol. XII)

By SHAILER MATHEWS, of the Department of New Testament Literature and Interpretation. The messianic hope of the Pharisees is formulated as a criterion for historical interpretation. With its aid a study is made of the messianic ideas of Jesus, the New Testament doctrine of judgment and justification through faith; the messiahship of Jesus as the basis of the apostolic theodicy; the messianic age and its forerunner the gift of the spirit; the resurrection of the body; the coming of the kingdom; the "consummation." As a conclusion there is shown the distinction between the essential and the formal elements of historical Christianity made possible by such an investigation. [In press.]

Glacial Studies in Greenland (Vol. XIII)

By THOMAS C. CHAMBERLIN, of the Department of Geology. This will consist of a detailed description of about fifteen Greenland ice tongues, and of a portion of the main ice cap, dwelling especially upon the significant features, followed by a chapter on generalizations, a chapter on experiments, a chapter on theoretical deductions, and a chapter on the applicability of the generalizations and deductions to the great ice invasions of the past. [In preparation.]

Lectures on the Calculus of Variations (Vol. XIV)

By OSKAR BOLZA, of the Department of Mathematics. This treatise is, in substance, a reproduction in considerably extended form of a series of lectures delivered by the author at the Colloquium held in connection with the summer meeting of the American Mathematical Society at Ithaca, N. Y., in August, 1901. It gives a detailed account of the typical and most important class of problems in the calculus of variations — in which an integral depending upon a plane curve and containing no higher but the first derivatives of the unknown functions is to be maximized or minimized — with special emphasis upon the progress of the theory during the last twenty-five years. The following topics are treated: (1) The older theory of the first and second variation from Euler to Jacobi, and the critical revision of its foundations and demonstrations by DuBois-Reymond, Scheeffer, Weierstrass, and others. (2) Weierstrass's theory: the problem in parameter-representation, the fourth necessary condition; sufficient conditions. (3) Simplifications and extensions of Weierstrass's theory, especially by Kneser and Hilbert. (4) The so-called isoperimetric problems. (5) Hilbert's existence theorems. [In preparation.]

Studies in General Physiology (Vol. XV)

By JACQUES LOEB, of the Department of Physiology. This volume will contain some of the author's principal papers on the subjects of animal tropisms, heteromorphosis and artificial transformation of organs, artificial parthenogenesis, physiological effects of ions, the effects of lack of oxygen, function of cell nucleus, etc. These papers have appeared in scattered German periodicals or as separate publications in German, and many of them are now out of print or inaccessible. Part I, about 400 pages, ready June 1. *Net*, $3.00; postpaid, $3.20. Part II, ready Nov. 1.

The Finality of the Christian Religion (Vol. XVI)

By GEORGE BURMAN FOSTER, of the Department of Systematic Theology. The work has two sections: "Christianity as Authority-Religion" and "Christianity as Religion of the Moral Consciousness of Man." In the first section the rise, development, and disintegration of Christianity as authority-religion is historico-critically traced. In the second section, Christianity as religion of the moral consciousness is defined in antithesis to the extremes of naturalism and clericalism. Then the respective merits of the dogmatic and the religio-historical methods of approach to the main subject are examined. Finally, in the light of the originality of personality on the one hand, and of the doctrine of a forever progressive humanity on the other, in accordance with the idea of evolution, the problem, "Is Christianity the Ultimate Religion?" is treated in a critical and constructive manner. [In preparation.]

Predecessors of Goethe in Italy in the Eighteenth Century (Vol. XVII)

By CAMILLO VON KLENZE, of the Department of the Germanic Languages and Literatures. The aim of this investigation is to study in detail the attitude toward Italy taken by the eighteenth century, with a view to determining not merely what those generations saw or failed to see in the peninsula, but to decide, too, in how far Goethe's famous *Italienische Reise* — a book the value of which has been so variously estimated — shows dependence on the preference and prejudices of its time, and furthermore in how far — if at all — Goethe goes beyond his contemporaries. In this fashion, it is hoped, something may be done toward eliminating from our judgment of this famous work that element of shifting subjectivity which has so far prevailed. [In preparation.]
